>>>CLICK HERE<<<
A very simple audio power amplifier circuit built with 741, 2N3053, 2N4037, 2N3055 and MJ2955 which deliver up to 50W on an 8Ω speaker. Use a 3A symmetric.

Hello friends, someone please help me to build this amplifier. Will it work? What changes this circuit will need to work on 12V supply. This kind of power amplifier circuit need high power consumption, so you need to build the circuit.

This circuit is simple and very easy to build. The amplifier uses a pair of power transistors that are MJ2955 and 2N3055 to amplify the input signal. It is a simple circuit regulated power supply, based on the known UA723, that outputs 12V.
